ACN-Data sessions
JPL & Caltech, 2019
(arrival, departure,
kWh, declarations)
Rolling calibration
60 days before month
errors Δd, ρ
quantiles at level q
Robust targets
$\tilde{d} = \hat{d} + Q_{1-q}(\Delta d)$
$\tilde{e} = \hat{e}\, Q_q(\rho)$
Peak-state MPC (LP)
energy cost + demand
charge on increment
above month peak
Bill, peak,
energy served,
unmet kWh
state
rates
Event-driven replay, 5-min steps
true departure and energy revealed online
optional top-up below month peak
